

Termite Control Brisbane

FORTRESS PEST CONTROL provides general pest control and termite management services in and around Brisbane.

Termite management first step is to conduct a Visual Termite Inspection as per AS3660.2-2000 to define the extent of the infestation.

General Pest Control with an inspection of the property and talking to the owners/occupiers to make sure no pests are present.

Pest & Termite Control Services Offered in Brisbane and Suburbs:

GENERAL PEST CONTROL (domestic and commercial)

TERMITE CONTROL and MANAGEMENT (chemical treated zones "chemical termite barriers", ne

VISUAL TERMITE INSPECTIONS (annual and pre purchase)

URBAN WEED CONTROL (selective weed management)

My name is **Peter Mesch** and I am the owner and operator of FORTRESS PEST CONTROL. By training, I am a Agricultural Scientist and worked as a research biologist for 18 years, employed by some of the major chemical research and manufacturing companies such as Du Pont, Dow AgroSciences and Syngenta.

In June 2000 I started my own pest control business while still conducting agricultural field trials in various crops including cotton which is the largest user of pesticides. With a research background I have a very good understanding and extensive knowledge of the insecticides used in urban pest control as they are the same chemicals that are used in agriculture. I have been around pesticides since I first went to University in Hungary in 1978 and worked with most of the currently registered pest control and termite control products in the last 40 years.
